IDE & Tools: Android Studio, iOS, IntelliJ Idea, VS Code, Xcode, Unity, Postman

CI/CD & App Deployment: Git, Github, Apple App Store, Google Play Store, Huawei store

Testing: Unit Testing, Crash Analytics, Performance Profiling, Code Reviews, Memory optimisation.

Soft Skills: Problem-Solving & Debugging, Clear Communication & Collaboration, Time Management

Projects

Kurd Shopping
Kurd Shopping (KS) – **Online Classified Marketplace Role:** App Developer |
Technology: React Native
Platform: Android **Link** **:** iOS **Link:**
Impact: 5 Lakh+ Downloads
Contributed to the development of Kurd Shopping, a large-scale online classified marketplace serving users in Kurdistan and Iraq. The platform enables users to buy, sell, and discover a wide range of products and services, including vehicles, properties, electronics, furniture, and more.
Worked on developing and maintaining the mobile application using React Native, focusing on smooth performance, intuitive user experience, reliable functionality, and an efficient marketplace experience for buyers and sellers.

EvryVision
EvryVision – **VR & 360° Video Player Role:** Solo Developer | **Technology:** Unity
Platforms: [Android ↗] | [iOS ↗]
Independently designed and developed EvryVision, a VR and 360° video player that delivers immersive virtual reality experiences on smartphones and Google Cardboard. Built the application as a **white-label, multi-tenant platform**, enabling the same core product to be customised, branded, and deployed for multiple clients or tenants.
Managed the full development lifecycle, including product concept, architecture, UI/UX design, VR functionality, 360° video playback, multi-tenant customisation, performance optimisation, testing, and deployment to the Google Play Store. Built using Unity to deliver smooth, intuitive, and engaging immersive video experiences.

SEEYOU GPT, AI Platform
Built **SEEYOU GPT**, an AI-powered conversational platform similar to ChatGPT, from scratch.
- Designed the UI, architecture, and real-time chat experience.
- Implemented GPT streaming, API integration, and state management.
- Handled testing, deployment, performance, and maintenance independently.

FindQo App, Irish rental platform
Led the end-to-end development of a dynamic property sales and rental platform, initially collaborating with a team and later taking full ownership of design, development, testing, and deployment for both **iOS** and **Android** apps, and publishing on the App Store and Play Store.
Key Responsibilities:
- Collaborated on core architecture and features in a 3-member team.
- Led end-to-end development, including UI/UX, property search, filters, listings, and contact features.
- Integrated APIs for listings, authentication, and notifications.
- Optimised performance and managed app publishing on Google Play and the App Store.

Daem POS, Application for retail shop
Independently developed and managed a POS application for retail shops, handling everything from feature implementation and UI/UX discussions with the backend team to deploying background syncing, product management, and invoice generation features, along with publishing on the Google Play Store .
Key Responsibilities:
- Coordinated UI/UX decisions in collaboration with the backend team for better workflow and usability.
- Managed the full app lifecycle: development, testing, deployment, and Play Store publishing.

XperienceIT - Book Your Events, Event Booking App
Developed features for an app that helps users plan and book personalised events like birthdays, anniversaries, and romantic experiences, including décor, gifts, venues, and more. And also deployment on the Google Play Store.

FindQo
FindQo – **Property Platform Role:** Web App Developer **Contribution:** Bug Fixes & Improvements
Contributed to the FindQo mobile app by identifying and fixing bugs, improving app stability, performance, and overall user experience.

Education

BTech in CSE, BSSITM
07/2022 – 07/2025 | Lucknow, India

Diploma in CSE, Govt. Polytechnic
07/2017 – 07/2020 | Pratapgarh, India

Achievement

Visited client offices in the **UAE (Dubai and Abu Dhabi)** for **international** project collaboration.

Quickly learned **Unity** and VR development technologies to successfully deliver an immersive **VR video player** application within the project requirements.

Personal Project

Mate Dating App, Mate – Swipe, Match & Chat for Real Connections, and Meet your love one
Mate is a privacy-focused dating and social app designed to help people connect, meet, and build meaningful relationships. The app has achieved **10K+ downloads on Google Play**.
Designed and developed the app from scratch in collaboration with a co-developer, contributing across product planning, architecture, UI/UX, frontend development, backend integration, and core features.
Key Responsibilities:
- Collaborated with a co-developer to build the application from scratch.
- Planned the app's **design, architecture, user flows, and overall product structure**.
- Built secure matching and invitation flows with a focus on **user privacy**.
- Designed a clean and intuitive **UI/UX** for smooth navigation and engagement.
- Integrated **push notifications and analytics** to improve user engagement and track behaviour.
- Handled backend integration using **Firebase and Node.js**.
